

Quest 3: UI

A Proper Game Over (4p)

The Game Over screen from the lecture does not go away anymore, and additionally it will not display when falling down the level. Moreover, the character can still move, even after the health is below 0.

The tasks are:

- Add a respawn button to the GameOver Canvas (with the GameOver text). Whenever this button is pressed, the player should respawn. The GameOver Canvas should be faded out again, while the HUD should fade in – with the health restored to 100% and the coin counter reset to 0
- Add an exit button to the GameOver Canvas as well. Use `Application.Quit()` to exit the game. Note: This will only work in a build, not in the editor.
- Change the character script, so that the player cannot move anymore when the health is 0
- Instead of respawning automatically when falling down the level, set the player health to 0 and fade in the GameOver Canvas while fading out the HUD.

Jewel (3p)

Create a new script for the jewel model you can find in the prefabs (Assets/Prefabs/World/jewel). Add a trigger to the model.

When the player triggers the jewel, a victory screen should fade in. You can design it to your liking!

Place the jewel at the end of your level. It is the goal of the game to collect it!

Finishing Touches (3p)

Before the level (and this game) is finished, we should polish and extend the level a bit. You can be creative!

However, there are a few things you will have to add to it:

- At least three signs in total, with different localized strings, giving you either hints or some funny jokes
- At least two parts of the level should contain dangerous saw traps, where you could lose health
- Let the player take damage from your own creature you animated in the last exercise. Have at least two creatures in your level!

Make sure the player is able to die from losing health and it is not too easy! Try to make it fun!
